

# Administrator Guide

The Administration section contains several sections dedicated to configuring the basic rules of your CardioLog system, and how your colleagues may access and edit different aspects of your CardioLog system.

- **Blacklist** - Create a list of rules for data that will not be collected in order to avoid including irrelevant information in your Reports and Analysis.
- **CardioLog Scheduling Service** - The CardioLog Scheduling Service allows you to maintain accuracy by keeping your site data, user directory, reports, analysis, logs, and more updated regularly.
- **IIS Logs Import** - Import IIS logs into CardioLog Analytics to gather your site tracking data prior to setting up CardioLog.
- **Product License** - View the features of your licensed product components and install new licenses.
- **Roles** - Assign roles to users and groups within CardioLog Analytics and limit permissions selectively.
- **System Configuration** - Connect and configure CardioLog Analytics with various aspects of your website including file trees, user databases, Yammer or Sitrion social environments, report data caching, and more.
- **System Diagnostics** - Use system diagnostics to view and confirm the status of your scheduling service components.
- **URL Mappings** - Establish rules for how modified URL addresses are stored after they are collected by the tracking agent.

**CARDIOLOG ANALYTICS** Knowledge base | Connected As INTLOCK-QA\Administrator

## Administration

- Black List**  
Create a Black List of rules for data that should not be collected, to eliminate irrelevant information  
[Creating and managing black list rules](#) | [Add new black list rule](#) | [learn](#)
- Roles**  
Assign roles to users and groups in CardioLog Analytics and limit access to those with system roles.  
[Manage user roles and privileges](#) | [Add new system role](#) | [learn](#)
- CardioLog Scheduling Service**  
Configure the various components of the CardioLog Scheduling Service  
[Configuring CardioLog Scheduling Service](#) | [learn](#)
- System Configuration**  
Connect CardioLog Analytics to your site and configure your report data.  
[Configuring your installation](#) | [learn](#)
- IIS Logs Import**  
Import IIS logs into CardioLog Analytics to gather your existing usage tracking data, dating before the installation of CardioLog Analytics  
[Gathering IIS logs data](#) | [learn](#)
- System Diagnostics**  
Use system diagnostics to view the status of the scheduling service's components  
[Configuring CardioLog Diagnostics Service](#) | [learn](#)
